POWELL, OH Chapter 31 fall seminar is Oct. 25

geoAMPS has been invited to give a presentation to another chapter of the International Right of Way Association (IRWA).

The Columbus, OH, area technology company is scheduled to speak during the fall seminar of IRWA Chapter 31, serving both North Carolina and South Carolina. The seminar is planned for Oct. 25 in Charleston, S.C.

"We are pleased that each of our presentations has been well received," Yogesh Khandelwal, President and Chief Executive Officer of geoAMPS, said. "We greatly appreciate the opportunity to discuss how technology is making it possible to complete even the most complex right of way projects quicker and more efficiently."

geoAMPS has presented at several IRWA chapter meetings in recent months and has welcomed each opportunity.

"We are pleased that each of our presentations has been well received," Yogesh Khandelwal, President and Chief Executive Officer of geoAMPS, said. "We greatly appreciate the opportunity to discuss how technology is making it possible to complete even the most complex right of way projects quicker and more efficiently."

geoAMPS is a technology company that specializes in software solutions to manage land rights and infrastructure assets. The company helps organizations implement standard processes, bringing efficiency and optimization within project and asset management.

The presentation for IRWA Chapter 31 will include how web-based software and a centralized database of organizational and project information offer substantial benefits to completing right of way projects and managing assets. Those benefits include a single access point for all project information; the ability to immediately update the project file; the use of geographic information system (GIS) mapping; automatic audit controls and report generation; and the ability for right of way agents to use mobile devices to review and update project information when in the field.

geoAMPS introduced mobile technology to the right of way industry.

geoAMPS mobile technology also features detached capabilities, which allow agents to continue to access and update project files through the centralized database even when an Internet connection is lost or unreliable.

geoAMPS offers an extensive line of products. One of its software products is rowAMPS, which allows companies to manage right of way projects in a real-time paperless environment that enables collaboration, efficiency and error reduction.

IRWA has nearly 10,000 members throughout the United States and Canada, and in South Africa. The South Carolina-North Carolina chapter is one of 74 IRWA chapters.

Dan Liggett is Communications and Public Relations Manager for geoAMPS, a technology company located in the Columbus, OH, area that specializes in software solutions to manage land rights and infrastructure assets. For more information, visit www.geoamps.com or call 614-389-4871.
