

geoAMPS Releases New Mobile App

Keeping up with the the goal to maintain a leading role in right of way management, geoAMPS is beta testing its mobile application on

the Android platform for release in March. In early January, geoAMPS released an updated version on the iPhone platform, which leverages some of the newer enhancements on this platform such as voice to text. Mobile apps on both platforms are an industry exclusive allowing organization field agents to access, edit and add information on the go.

Yogesh Khandelwal, President and CEO of geoAMPS believes that the mobile application gives right of way companies a unique opportunity to increase their productivity. "The geoAMPS mobile app allows users the ability to make notes and access project information instantly on the job site. Having access to generate documents, access current addresses and phone numbers of landowners allows increased efficiency within projects."

The developers at geoAMPS focused on usability when creating the apps, worked with longtime users of the iPhone and Droid mobile platforms, creating a fluid experience for the end users.
