POWELL, OH Meeting is Oct. 17 in San Antonio, Texas

Yogesh Khandelwal, President and Chief Executive Officer of geoAMPS, is scheduled to speak at the Oct. 17 meeting of the San Antonio chapter (Chapter 39) of the International Right of Way Association (IRWA).

"Technology is making it possible to complete even the most complex right of way projects quicker and more efficiently," Yogesh Khandelwal, President and Chief Executive Officer of geoAMPS, said.

He will discuss how advances in technology and computer software can greatly improve efficiency in conducting right of way acquisition.

"Technology is making it possible to complete even the most complex right of way projects quicker and more efficiently," Yogesh said. "I greatly appreciate the invitation from the San Antonio chapter and look forward to speaking with the members."

An engineer with a diverse background in technology across various industries, Yogesh has more than 15 years of experience in database configuration and implementation. The company he founded, geoAMPS, helps organizations implement standard processes, bringing efficiency and optimization within project and asset management. Located in the Columbus, OH, area, geoAMPS specializes in software solutions to manage land rights and infrastructure assets.

In his presentation, Yogesh will discuss how web-based software and a centralized database of organizational and product information offer substantial benefits to completing today's right of way projects. Those benefits include a single access point for all project information; the ability to immediately update the project file; the use of geographic information system (GIS) mapping; automatic audit controls and report generation; and the ability for right of way agents to use mobile devices to review and update project information when in the field.

In addition to mobile technology, geoAMPS offers detached capabilities that allow agents to continue to access and update project files even when an Internet connection is lost or unreliable.

geoAMPS has an extensive line of products, including rowAMPS, which allows companies to manage right of way projects in a real-time paperless environment that enables collaboration, efficiency and error reduction.

IRWA has nearly 10,000 members throughout the United States and Canada, and in South Africa. The San Antonio chapter is one of 74 IRWA chapters.

Dan Liggett is Communications and Public Relations Manager at geoAMPS, a technology company located in the Columbus, OH, area that specializes in software solutions to manage land rights and infrastructure assets. For more information, visit www.geoamps.com or call 614-389-4871.
